

Simple. Convenient. Effective. **Revolutionary.**

BART® Achieves Abrasive Removal Rates of Over 3,000 lbs./hr.

The BARTON Abrasive Removal Tool – BART® has revolutionized the way operators remove spent garnet from their waterjet equipment. Introduced in 2009, BART is an easy-to-use, portable abrasive removal system. Since then, hundreds of waterjet operators have used this remarkably convenient, efficient, versatile, cost-effective piece of equipment.

NO DOWNTIME. MAXIMIZE CUTTING

- There is no need to shut down, or remove the slats from the table. Simply place the BART Wand between the slats to remove spent garnet, while cutting continues.

EASY TO USE

- Simple to assemble and easy to operate.
- Requires a 2.5–3.0 gpm, 2500–3000 psi pressure washer.
- Efficient design combined with effective technology works hard so you don't have to!

LOW MAINTENANCE. LOWER COSTS

- No moving parts, pumps or filters; a single wear part – the Jet Nozzle.
- Garnet is pulled up the Wand and discharged through the hose, never coming into contact with the pressure washer.
- A fraction of the cost of other abrasive removal systems.

PORTABLE – USE ON MULTIPLE MACHINES

- Lightweight and portable, the system can be used on multiple machines.

BARTON ABRASIVE REMOVAL TOOL

Made in the USA

BARTON

“We run 24/7 and cannot afford downtime. With BART®, we remove sand from the tank without shutting down the waterjet. Can’t say enough good things about the tool or the company behind it.”

LLOYD S., NOGALES, AZ

“Our old clean-out method of shoveling by hand is antiquated and labor-intensive. With BART, one person can clean the bed in less than half the time. It’s a huge savings.”

HERB S., ABERDEEN, WA

Accessories

BART PORTABLE DIFFUSER

Helps suspended solids settle quickly in the collection vessel, so water returned to the table is free of abrasive.

- Lightweight and portable

BART TIP HOPPER

The most convenient method of collecting and transporting spent abrasive.

- Discharge receptacle with spout, 3/4 yard capacity
- 18" discharge hose returns overflow water back to your waterjet table
- 8" steel casters allow for easy movement

BART 55-GALLON DRUM WITH DIFFUSER

The diffuser helps suspended solids settle quickly in the collection vessel, so water returned to the table is free of abrasive. Convenient for customers who dispose of abrasive in 55-gallon drums.

- 55-gallon capacity discharge receptacle with attached diffuser
- A forklift-mounted drum tipper is recommended for moving and emptying of drums (not included)
